

The World's Energy Ecosystem, All in One Region

Across the 12-county Houston region, companies spanning oil and natural gas, LNG, petrochemicals, power generation, grid infrastructure, solar, wind, battery storage, hydrogen and advanced energy technologies operate side by side. That concentration gives energy companies access to experienced talent, established supply chains, major industrial customers, global trade infrastructure and potential partners. The synergy of the ecosystem helps companies build, scale and deploy globally.

The Greater Houston Partnership helps companies put those advantages to work, providing support with site selection, available tax incentives, workforce development and connections to industry leaders, economic development organizations and strategic partners. From evaluating a Houston location to establishing and expanding operations, GHP helps companies navigate the region and access the people, infrastructure and resources needed to grow.
